November 9, 2007

To: Keyspan

RE:

, who resides at
(Keyspan account number) is a patient at East Somerville Family Health Center. Ms. is recovering from spinal surgery, which was triggered by a chronic medical condition. She is also being treated for hypothyroidism and a sleep disorder. In January of this year, she was seen with vertigo and cerebellar ataxia. A neurology workup revealed that she may have had a small stroke, so she should be taking 81 mg of aspirin daily preventatively.

Sincerely,

Barbara Hume, APRN
